Men’s Health
TOTAL BODY MUSCLE PLAN
GETTING STARTED

This all-new, 10-part plan will teach you how to build the body you want, one muscle group at a time, in just three workouts a week—guaranteed.

EXPECTING MUSCLES BUILT FOR LOOKS to perform well is like gathering your family for a touch-football game and expecting them to run the West Coast offense.

There’s a perfect way to build multipurpose muscle, says Michael Mejia, C.S.C.S., our workout expert. It hinges on one word: stability. See, most guys lift weights from the outside in. That is, they start with an idea of what they want their muscles to look like and go from there, pummeling their biceps and pectorals and abs with the most basic exercises. The result: big muscles that look really good from the outside and perform really well in isolation, but lack simple balance and coordination. With our plan, you start with the basic exercises most men already know how to do, but as you get comfortable with them, you move on to exercises that challenge your balance and coordination. You still get big, strong muscles, but as they grow bigger and stronger, they also work together better.

FIND YOUR LEVEL

BEGINNER
If you’re new to weight lifting or are returning to it after a long layoff, consider yourself a beginner.

INTERMEDIATE
An intermediate has been lifting for at least 6 months to a year, has tried several different workout programs, and has seen gains in strength and muscle mass.

ADVANCED
An advanced lifter has been lifting consistently for more than a year, has seen considerable gains in strength and size, is proficient at squats and several varieties of deadlifts, and can do at least five pullups.
THE EXERCISES IN THIS FIRST CHAPTER will help protect your shoulders from injury and ensure a strong, stable frame. So when it comes time to run a pick-and-roll, toss your kids in the air (for height or distance), or uproot a few saplings to make way for your new backyard putting green, you’ll have what it takes. But you’ll also receive an extra benefit: muscles that will pump up nicely for display purposes.

Do the shoulder exercises first in your workout. After that, it’s up to you how to fit in exercises for other muscle groups. Most important: Build strength and muscle size with equal effort on both sides of your body. Working the front and neglecting the back is a recipe for injury. Some suggestions:

**BEGINNER** Do a total-body workout two or three times a week. After you finish your shoulder exercises, you can try one set of eight to 12 repetitions of the following exercises (except where noted):
- Lat pulldown
- Squat or leg press
- Leg curl
- Dumbbell chest press
- Cable or dumbbell row
- Cable triceps extension
- Dumbbell biceps curl
- Crunch (15–20 repetitions)

**INTERMEDIATE** Divide your program into two workouts: one for the upper body, one for the lower. Alternate between the two workouts, taking a day off after each. So you would do the upper-body workout on Monday and Friday of one week and the lower-body workout on Wednesday, then the following week do the lower-body workout on Monday and Friday and the upper-body workout on Wednesday.

**Upper-body workout** After doing this shoulder program, choose one exercise each for chest, back, biceps, and triceps. Do two or three sets of the chest and back exercises and one or two sets of the arm exercises.

**Lower-body workout** Choose one “hip-dominant” exercise, meaning that the main emphasis of the exercise is on the hamstrings and gluteals (examples: stepups and any variety of deadlift). Then choose one “knee-dominant” exercise, meaning the emphasis is on the quadriceps muscles—the front of the thigh. (Squats, leg presses, and lunges qualify.) Do two or three warmup sets and two work sets of each. (Use heavier weights and do fewer repetitions in each warmup set. A work set means you’re using the most weight you can for that number of repetitions.) Add your choice of abdominal and calf exercises.

**ADVANCED** Divide your workout into four parts. Do each once a week; don’t work out more than 2 days in a row.
1. Shoulders and arms
2. Knee-dominant exercises (described above), plus abs and calves
3. Chest and back
4. Hip-dominant exercises (also above), plus abs and calves again
BEGINNER

Do the three beginner exercises for 4 weeks, then switch to the intermediate exercises for 4 weeks. If you want, you can do the advanced exercises for the next 4 weeks after that, or go back and repeat the beginner and intermediate exercises, using heavier weights and fewer repetitions.

WEEK 1: Do 1 set of 10–12 repetitions of each exercise.
WEEK 2: 1 or 2 sets of 10–12
WEEK 3: 2 or 3 sets of 10–12
WEEK 4: 3 sets of 10–12
WEEK 5: 2 sets of 8–10
WEEK 6: 2 or 3 sets of 8–10
WEEKS 7 & 8: 3 sets of 8–10

Seated Alternating Dumbbell Press

1. Grab a pair of dumbbells and sit on a bench, holding the weights at jaw level, just outside your shoulders. Your palms should face forward.
2. Starting with your weaker arm (probably your left if you’re right-handed), lift one dumbbell overhead until your arm is straight.
3. As you lower it, raise the other—that’s one repetition.
4. Alternate until you finish the set.

45-Degree Scarecrow

1. Set an incline bench to 45 degrees.
2. Holding a pair of light dumbbells, lie chest-down on the bench. Raise your upper arms so they’re perpendicular to your torso and parallel to the floor. Bend your elbows 90 degrees, so your forearms hang straight down toward the floor.
3. Keeping your elbows, wrists, and upper arms in fixed positions, rotate the weights up and back as far as you can—you want your shoulders to act like hinges, your arms like swinging gates.
4. Pause, then slowly lower the weights.

Snatch-Grip Shrug

1. Grab a barbell with an overhand grip that’s as wide as comfortably possible. Hold the bar down at arm’s length in front of you.
2. Lean forward slightly so the bar is about an inch in front of your thighs.
3. Shrug your shoulders as high as you can.
4. Pause, then slowly lower the barbell.
**Intermediate**

Do the three intermediate exercises for 4 weeks, then switch to the advanced moves for 4 weeks.

**WEEKS 1 & 2:** 2 sets of 10–12

**WEEKS 3 & 4:** 2 or 3 sets of 8–10

**WEEKS 5 & 6:** 2 sets of 8–10

**WEEKS 7 & 8:** 2 or 3 sets of 6–8

---

**Hang Clean and Press**

1. Grab a barbell with an overhand, shoulder-width grip, and hold it in front of your thighs while standing with your knees slightly bent. Your lower back should be in its natural alignment (slightly arched, in other words).
2. Shrug your shoulders as you pull the bar up as hard as you can. You should rise up on your toes as you do this.
3. When the bar reaches chest level, bend your knees again, rotate your forearms from the elbows, and bend your wrists so they go around the bar as you “catch” the bar on the front of your shoulders (shown).
4. Straighten your knees, then press the bar overhead.
5. Lower the bar to your shoulders, then rotate your arms and wrists back as you lower the bar to your waist, then finally lower it to your thighs again.
6. Throughout the exercise, the bar should stay as close to your body as possible.

---

**Alternating Lateral Raise with Static Hold**

1. Sit holding a pair of dumbbells at your sides, your palms facing in.
2. Lift the dumbbells straight out to your sides.
3. Lower and raise one dumbbell, starting with your weaker arm (your left if you’re right-handed), then lower and raise the other. That’s one repetition.

---

**Double-Cable External Rotation**

1. Attach two stirrup handles to the low cables of a cable-crossover station.
2. Grab the left handle with your right hand and the right handle with your left, and stand in the middle of the station with your elbows bent 90 degrees and the cables crossing over each other in front of your midsection.
3. Rotate your forearms up and outward, as if they were two gates swinging out from your upper arms, which act as hinges.
4. Pause, then slowly return your arms to the starting position.
ADVANCED

Do the intermediate exercises for 4 weeks, then the advanced exercises for 4 weeks.

WEEKS 1 & 2: 2 sets of 6–8, after a thorough warmup with lighter weights
WEEKS 3 & 4: 2 or 3 sets of 4–6, after warmup
WEEKS 5 & 6: 2 sets of 6–8
WEEKS 7 & 8: 2 or 3 sets of 4–6

Twisting Standing Dumbbell Shoulder Press

1 Stand holding a pair of dumbbells just outside your shoulders at jaw level, palms facing in.
2 Press the dumbbells overhead as you twist to your right.
3 Lower the dumbbells as you twist back to the center, then twist to the left as you press the weights upward again.
4 If you end the set with an odd number of repetitions, start the next set by twisting to the side opposite the one you finished on in the previous set.

Alternating 45-Degree Incline Shoulder Press

1 Grab a pair of dumbbells and position yourself on your back on a Swiss ball or incline bench so your torso is at a 45-degree angle to the floor.
2 Hold the dumbbells just outside your shoulders at about jaw level, with your palms facing forward. Your forearms should be in line with your torso.
3 Lift one dumbbell overhead so the weight is in a line with your torso. As you lower it, lift the other.
4 Alternate until you finish the set.
5 Alternate the arm you start with on each set.

Overhead Dumbbell Shrug

1 Stand holding a pair of dumbbells overhead, just beyond shoulder-width apart, palms facing forward.
2 Shrug your shoulders up as high as you can.
3 Pause, then slowly lower your shoulders.
Over the years, you’ve learned to avoid unstable situations—internships in Iraq and horse-loving girlfriends, for example—because your life is a lot easier that way.

And you probably apply the same thinking to your workouts. That is, you do exercises—such as the standard bench press—with your body in a supported, stable position, in order to isolate specific muscle groups. But performing the same exercises while you’re in an unstable position—so that you have to balance yourself as you lift—forces the smaller, surrounding muscles to work, too. And that means a more productive workout.

Using instability to your advantage can lead to the best gains you’ve ever achieved in strength, muscle, and athletic performance. Think about when you first learned to walk. As you advanced from crawling to standing to walking, your body position became less stable. But as a result, you became stronger. That’s because your muscles had to perform better in each stage.

In this plan, you’ll give your chest and back the same advantage. By changing from stable to less stable positions, you’ll not only build the muscles you can see, but you’ll also build the underlying stabilizer muscles you’ve ignored for years. And by training your body in unstable positions, you’ll prepare it to be more stable when it counts—like when it’s time to get away from that horse-loving girlfriend.

Beginner
Do a total-body workout two or three times a week. After you finish your chest and back exercises, try one set of eight to 12 repetitions of the following exercises (except where noted):
- Squat (or leg press)
- Leg curl
- Seated alternating dumbbell press
- Cable triceps extension
- Dumbbell biceps curl
- Crunch (15-20 repetitions)

Intermediate
Divide your program into two workouts, one for upper body, one for lower. Alternate between the two, taking a day off after each. So, you’d do the upper-body workout on Monday and Friday of one week and the lower-body workout on Wednesday, then the following week you’d do the lower-body workout on Monday and Friday and the upper-body routine on Wednesday.

Upper-body workout After doing the chest and back program in this installment, choose one exercise each for shoulders, biceps, and triceps. Do two or three sets of the shoulder exercise and one or two sets of the arm exercises.

Lower-body workout Choose one “hip-dominant” exercise, meaning the main emphasis of the exercise is on the hamstrings and gluteals (examples include stepups and any variety of deadlift). Then choose one “knee-dominant” exercise, meaning the emphasis is on the quadriceps muscles of the front of the thigh (squats, leg presses, and lunges qualify). Do two or three warmup sets and two work sets. (A work set means you’re using the most weight you can for that number of repetitions. The warmup sets should be percentages of that weight—maybe 40, 60, and 80 percent. Do fewer repetitions in each warmup set.) Add your choice of abdominal and calf exercises.

Advanced
Divide your workout into four parts. Do each one once a week; don’t work out more than 2 days in a row.
1. Chest and back
2. Knee-dominant exercises (described above), plus abs and calves
3. Shoulders and arms
4. Hip-dominant exercises (also above), plus abs and calves again
**BEGINNER**

Do these four beginner exercises for 4 weeks.

**WEEK 1:** Do 1 set of 10–12 repetitions of each exercise.

**WEEK 2:** 1 or 2 sets of 10–12

**WEEK 3:** 2 or 3 sets of 10–12

**WEEK 4:** 3 sets of 10–12

Increase weights each week.

---

**Three-Point Pushup**

1. Get into pushup position—your hands set slightly wider than and in line with your shoulders—with your arms straight. Place the ball of your left foot on top of your right heel.
2. Keep your back flat, and lower your body until your chest nearly touches the floor.
3. Pause, then push yourself back up to the starting position.

---

**Flat-Bench Fly (Feet Elevated)**

1. Grab a pair of dumbbells and lie on your back on a flat bench, with your hips and knees bent 90 degrees and your feet in the air. Hold the dumbbells over your chest with your elbows slightly bent and thumbs turned toward each other.
2. Slowly lower the dumbbells down and slightly back until your upper arms are parallel to the floor and in line with your ears.
3. Pause, then lift the dumbbells back to the starting position.

---

**45-Degree Prone Dumbbell Row**

1. Set an incline bench to a 45-degree angle. Grab a pair of dumbbells and lie chest-down against the pad. Let your arms hang straight down from your shoulders and turn your palms so that your thumbs are facing each other.
2. Bend your elbows and lift your upper arms as high as you can by squeezing your shoulder blades together. Your upper arms should be almost perpendicular to your body at the top of the move. Your forearms should be pointing toward the floor.
3. Pause, then slowly lower the weights to the floor.

---

**Pronated Lat Pulldown**

1. Grab a lat-pulldown bar with a shoulder-width, overhand grip.
2. Moving only your arms, pull the bar down to your chest by squeezing your shoulder blades together.
3. Pause, then slowly return to the starting position.
**INTERMEDIATE/ADVANCED**

**INTERMEDIATE**
Do the six intermediate/advanced exercises, shown here, for 4 weeks.

**WEEKS 1 & 2:** 2 sets of 10–12

**WEEKS 3 & 4:** 2 or 3 sets of 8–10

**ADVANCED**
Do the six intermediate/advanced exercises, shown here, for 4 weeks.

**WEEKS 1 & 2:** 2 sets of 6–8, after a thorough warmup with lighter weights

**WEEKS 3 & 4:** 2 or 3 sets of 4–6, after warmup

---

**Swiss-Ball Pushup**

1. Get into pushup position—your hands set slightly wider than and in line with your shoulders—but instead of placing your feet on the floor, rest your shins on a Swiss ball. With your arms straight and your back flat, your body should form a straight line from your shoulders to your ankles.

2. Lower your body until your chest nearly touches the floor.

3. Pause, then push yourself back up to the starting position.

---

**Alternating Decline Dumbbell Press**

1. Grab a pair of dumbbells and lie on your back on a decline bench.

2. Hold the dumbbells just outside your shoulders, with your arms bent and your palms facing forward.

3. Push one dumbbell up and slightly toward your head so that when your arm is extended, the dumbbell is above your chin.

4. As you lower the dumbbell back to your chest, repeat the movement with your other arm.

5. Alternate until you finish the set.

6. Alternate the arm you start with on each set.

---

**Low-to-High Cable Fly**

1. Attach two stirrup handles to the low cables of a cable-crossover station.

2. Grab the left handle with your left hand and the right handle with your right, and stand upright in a staggered stance in the middle of the station, with your arms outstretched but slightly bent.

3. Pull the handles up and together without changing the angle of your elbows, until the handles are even with your eyes.

4. Pause, then return to the starting position.
Snatch-Grip Bent-Over Row

1. Grab a barbell with an overhand grip that’s as wide as comfortably possible. Stand with your feet shoulder-width apart and knees slightly bent. Bend at your hips, lowering your torso about 45 degrees, and let the bar hang straight down from your shoulders.

2. Pull the bar up to your torso, pause, then slowly lower it.

Towel Pulldown

1. Drape a towel over each handgrip of a lat-pulldown bar. Sit on the bench and grab the ends of each towel so that your palms are facing each other.

2. Moving only your arms, pull the bar down below your chin by squeezing your shoulder blades together.

3. Pause, then slowly return to the starting position.

Seated Rear Lateral Raise

1. Grab a pair of dumbbells and sit at the end of a bench. Keep your back flat and your elbows slightly bent, and lean forward at the waist as far as you can. Let the dumbbells hang at arm’s length, with your thumbs turned toward each other.

2. Slowly raise the dumbbells as high as you can without changing the angle of your elbows.

3. Pause, then lower the dumbbells back to the starting position.
F YOU’RE LIKE US, you automatically delete any e-mail that has “FWD:FWD:” in the subject line because you’re tired of getting the same messages over and over again. Well, imagine how your muscles feel doing the same exercises the same way, workout after workout. Just like your brain, they need something beyond the same old stuff if you want them to get bigger and stronger.

In Part 2 of the chest and back program, you’ll force your muscles to work harder than ever by doing exercises that require you to balance and stabilize your body while lifting a weight. More muscle fibers and nerve endings get involved in each exercise, which means better results. If you’re a beginner, this workout will help you build overall strength faster than a routine using traditional versions of these exercises. And if you’re an intermediate or advanced lifter, the exercises here will help you see new gains in size and strength.

Oh, and before we forget: Be sure to forward this workout to everyone on your mailing list.

I

THE REST OF YOUR WORKOUT

Do the chest and back exercises described here before working other muscle groups. Try to increase the amount of weight you lift in each exercise by roughly 5 to 10 percent each week. You can do the remaining lifts in your workout in any order you wish. Some suggestions:

- **BEGINNER** Do a total-body workout two or three times a week. After you finish these chest and back exercises, try one set of eight to 12 repetitions (except where noted) of the following:
  1. Squat (or leg press)
  2. Leg curl
  3. Seated alternating dumbbell press
  4. Cable triceps extension
  5. Dumbbell biceps curl
  6. Crunch (15–20 repetitions)

- **INTERMEDIATE** Divide your program into two workouts, one for upper body, one for lower. Alternate between the two, taking a day off after each. For example, do the upper-body workout on Monday and Friday and the lower-body workout on Wednesday; the following week, do the opposite.

  **Upper-body workout** After doing these chest and back exercises, choose one exercise each for the shoulders, biceps, and triceps. Do two or three sets of the shoulder exercises and one or two sets of the arm exercises.

  **Lower-body workout** Choose one “hip-dominant” exercise, meaning it emphasizes the hamstrings and gluteals (examples include stepups and any variety of deadlift). Then choose one “knee-dominant” exercise, meaning it emphasizes the quadriceps muscles of the front of the thigh (squats, leg presses, and lunges qualify). Do two or three warmup sets and two work sets. (A work set means you’re using the most weight you can for that number of repetitions. The warmup sets should be percentages of that weight—maybe 40, 60, and 80 percent of the work-set weight. Do fewer repetitions in each warmup set.) Add your choice of abdominal and calf exercises.

- **ADVANCED** Divide your workout into four parts. Do each one once a week; don’t work out more than 2 days in a row.
  1. Shoulders and arms
  2. Knee-dominant exercises (described above), plus abs and calves
  3. Chest and back
  4. Hip-dominant exercises (also above), plus abs and calves again
**Wide-Grip Barbell Chest Press (Feet Elevated)**

1. Lie on your back on a flat bench with your hips bent 90 degrees and feet up in the air. (Keeping your feet elevated forces you to balance on the bench, which calls more muscle fibers into play.) Grab the bar with an overhand grip, your hands a bit farther apart than for a standard bench press, and lift it off the uprights. Hold it over your chin at arm’s length.

2. Slowly lower the bar until it nearly touches the middle of your chest.

3. Pause, then push the bar back up until your arms are straight and the bar is over your chin again.

**Bilateral Cable Rear Lateral Raise**

1. Attach two stirrup handles to the low cables of a cable-crossover station.

2. Grab the left handle with your right hand and the right handle with your left, and stand in the middle of the station. Keep your back flat, and bend at the waist and knees until your upper body is parallel to the floor. Your arms should be crossed in front of you and slightly bent.

3. Raise your arms until they’re parallel to the floor, without changing the angle of your elbows. Pause, then slowly return your arms to the starting position.

**Decline Fly**

1. Grab a pair of dumbbells and lie on your back on a decline bench. Hold the dumbbells directly over your lower chest, with your elbows slightly bent and thumbs turned toward each other.

2. Slowly lower the dumbbells and bring them slightly back toward your shoulders until your upper arms are parallel with the floor and in line with your ears.

3. Pause, then lift the dumbbells back to the starting position.

**Single-Arm Row (Elbow Out)**

1. Grab a dumbbell in your left hand and place your right hand and right knee on a flat bench. Keep your back flat and your upper body parallel to the floor. Let your left arm hang straight down from your shoulder, and turn your palm so that it’s facing your left leg.

2. Raise your left upper arm out to the side until it’s just past parallel to the floor. Your upper arm should be perpendicular to your body at the top of the move. Your lower arm should be pointing toward the floor.

3. Pause, then slowly lower the weight to the starting position.

**BEGINNER**

Do the four beginner exercises for 4 weeks.

**WEEKS 1 & 2:** 2 sets of 10–12 repetitions of each

**WEEKS 3 & 4:** 2 or 3 sets of 8–10

**WEEKS 1 & 2:** 2 sets of 10–12 repetitions of each

**WEEKS 3 & 4:** 2 or 3 sets of 8–10
**INTERMEDIATE**

Do the six intermediate/advanced exercises shown here for 4 weeks.

**WEEKS 1 & 2:** 2 sets of 8–10

**WEEKS 3 & 4:** 2 or 3 sets of 6–8

**IMPORTANT!** ALL SIX EXERCISES ON THESE TWO PAGES ARE FOR INTERMEDIATE AND ADVANCED LIFTERS. NOTE THE DIFFERENCES IN SETS AND REPETITIONS FOR EACH LEVEL.

---

**Swiss-Ball Reverse Pushup**

1. Lie under the bar and grab it with a shoulder-width, overhand grip. Hang at arm’s length from the bar with your body straight and your lower legs on a Swiss ball.
2. Keep your body rigid and pull your chest to the bar.
3. Pause, then lower yourself back to the starting position.

**Staggered-Grip Pullup**

1. Grab a pullup bar with an overhand grip. Your right hand should be directly above your right shoulder, and your left hand 6 to 12 inches outside of your left shoulder. Hang at arm’s length with your ankles crossed behind you.
2. Pull yourself up as high as you can.
3. Pause, then slowly return to the starting position.
4. Alternate hand positions on each set, so your right hand is placed out from the shoulder on the second set.

**Single-Leg Alternating Dumbbell Row**

1. Grab a pair of dumbbells and stand with your left foot in front of your right. Keep your back flat and bend over at the hips so the dumbbells are hanging at arm’s length from your shoulders, palms facing in. Raise your right foot off the floor.
2. Raise your left upper arm as high as you can by bending your elbow and squeezing your shoulder blade toward the middle of your back.
3. As you lower it, raise the other—that’s one repetition.
4. Alternate until you finish the set.

**Note:** Alternate the foot you raise and the arm you start with on each set.
Do the six intermediate/advanced exercises shown here for 4 weeks.

**WEEKS 1 & 2**: 2 sets of 6–8

**WEEKS 3 & 4**: 2 or 3 sets of 6–8, after a thorough warmup with lighter weights

---

**Santana T-Pushup**

1. Get into pushup position with your hands on the handles of dumbbells that have been placed shoulder-width apart.

2. Do a pushup, and as you come up, rotate your body so that you raise your left arm and the dumbbell straight up over your shoulder and your body forms a T.

3. Lower the dumbbell and yourself, and repeat to the other side.

**Note**: If you can, use hexagonal dumbbells the first few times you try this.

---

**Bent-Over Cable Crossover**

1. Attach two stirrup handles to the low cables of a cable-crossover station.

2. Grab the left handle with your left hand and the right handle with your right, and stand in the middle of the station. Keep your back flat and bend at the waist and knees until your upper body is parallel to the floor. Your arms should be outstretched but slightly bent.

3. Pull the handles together without changing the angle of your elbows, until your hands just pass each other.

4. Pause, then return to the starting position.

---

**Alternating Swiss-Ball Incline Dumbbell Press**

1. Grab a pair of dumbbells and position yourself on your back on a Swiss ball so your torso is at a 45-degree angle to the floor.

2. Hold the dumbbells just outside your shoulders at about jaw level, with your palms facing forward.

3. Press one dumbbell overhead so the weight is above your chin at the top of the move. As you lower it, press the other.

4. Alternate until you finish the set.

**Note**: Alternate the arm you start with on each set. If you’re doing an odd number of sets, start with your weaker arm on the first and third sets.
ORK OUT LONG ENOUGH and you’re bound to hear a trainer utter this weight-room truism: “You can’t shoot a cannon from a rowboat.” To which most guys reply, “Huh?”

Say you’re a beginner. You walk into the gym with a shopping list: wide shoulders, big biceps, abs like a brick walkway—all the fun stuff you see on the cover of this magazine. Getting these things seems like a straightforward proposition, so you press and curl and crunch, and follow that with more pressing, more curling, and more crunching. Then you wonder why you haven’t been asked to do a Bowflex commercial.

The problem is, you left out the most important part. Running, jumping, hitting, throwing, and heavy lifting all start with the muscles in your hips, thighs, and lower legs. When those muscles grow bigger and stronger, they allow your torso muscles to grow, which provides the structure for the arm and shoulder muscles you really want. This lower-body workout, the first of two parts, takes your scrawny, shaky foundation and makes it strong and solid enough to support some high-caliber weaponry up top.

So the next time you see a stick-legged guy doing your old press-curl-crunch combo, you can tell him, “You can’t fit Clint Eastwood’s gun in Roy Rogers’s holster.” He’ll have no idea what you’re talking about, but that’s not your problem.
BEGINNER

Do the five beginner exercises for 4 weeks.

WEEKS 1 & 2: 2 sets of 10–12 repetitions of each
WEEKS 3 & 4: 2 or 3 sets of 8–10

**Dumbbell Split Squat**

1. **Grab a pair of dumbbells and hold them at your sides.** STAND IN A STAGGERED STANCE WITH YOUR LEFT FOOT ABOUT 4 FEET IN FRONT OF YOUR RIGHT.
2. **Lower your body until your left knee is bent 90 degrees and your right knee nearly touches the floor. Your left lower leg should be perpendicular to the floor, and your torso should remain upright.**
3. **Push yourself back up to the starting position as quickly as you can. Finish all of your repetitions, then repeat the exercise with your right foot in front of your left.**

**Leg Press**

1. **Position yourself in a leg-press machine with your back against the pad and your feet about 4 inches apart on the platform.**
2. **Unlock the platform and slowly lower the weight until your knees are bent 90 degrees.**
3. **Pause, then push the weight back up to the starting position.**

**Snatch-Grip Romanian Deadlift**

1. **Grab a barbell with an overhand grip that’s as wide as comfortably possible. Hold the bar down at arm’s length in front of you. Your feet should be hip-width apart and your knees slightly bent.**
2. **Keep your lower back slightly arched and bend slowly at the hips as far as you can without losing the arch. Don’t change the angle of your knees, and keep the bar close to your body throughout the entire move.**
3. **Pause, then lift your torso back to the starting position.**

**Lying Leg Curl**

1. **Lie facedown on a leg-curl machine with the pads against your lower legs, above your heels and below your calf muscles.**
2. **Without raising your body off the pad, bend your legs at the knees and pull the weight toward you as far as you can.**
3. **Pause, then slowly return to the starting position.**

**Alternating Seated Calf Raise**

1. **Place a step in front of a bench, grab a pair of dumbbells, and sit down. Set the balls of both feet on the step, and place one dumbbell on each knee. Lower both heels as far as you can without touching the floor.**
2. **Push off the ball of your left foot and lift your left heel as high as you can. As you lower your left heel to the starting position, raise your right heel.**
3. **Alternate until you finish the set.**
An intermediate should do the five intermediate/advanced exercises for 4 weeks.

**WEEKS 1-2:** 2 sets of 8-10

**WEEKS 3-4:** 2 or 3 sets of 6-8

---

**ADVANCED**

Do the five intermediate/advanced exercises shown here for 4 weeks.

**WEEKS 1 & 2:** 2 sets of 6-8, after warmup

**WEEKS 3 & 4:** 2 or 3 sets of 4-6, after warmup

---

### Bulgarian Split Squat

1. Hold a barbell with an overhand grip so that it rests comfortably on your upper back (not on your neck) and stand about 3 feet in front of a bench. Place your left foot behind you on the bench so that only your instep is resting on it.

2. Lower your body until your right knee is bent 90 degrees and your left knee nearly touches the floor. Your right lower leg should be perpendicular to the floor, and your torso should remain upright.

3. Push yourself back to the starting position as quickly as you can. Finish all of your repetitions, then repeat the lift, this time with your right foot resting on the bench while your left leg does the work.

---

### Barbell Squat

1. Hold a barbell with an overhand grip so that it rests comfortably on your upper back (not on your neck). Set your feet shoulder-width apart, and keep your knees slightly bent, back straight, and eyes focused straight ahead.

2. Slowly lower your body as if you were sitting back into a chair, keeping your back in its natural alignment and your lower legs nearly perpendicular to the floor.

3. When your thighs are parallel to the floor, pause, and then return to the starting position.
**Good Morning**

1. Start in the same position as for the barbell squat.
2. Slowly bend forward at the hips as you lower your chest as far as you can go while maintaining the natural arch in your lower back, or until your upper body is parallel to the floor. Keep your head up and maintain about the same angle of your knees.
3. Lift your upper body back to the starting position.

**Single-Leg Curl**

1. Lie in a leg-curl machine with the pads against your lower legs, above your heels and below your calf muscles.
2. Without raising your body off the pad, bend your left leg at the knee and pull the weight toward you as far as you can. Your right leg should remain in the starting position.
3. Pause, then slowly return to the starting position. Finish the set, then repeat with your right leg.

**Single-Leg Standing Calf Raise**

1. Grab a dumbbell in your left hand and stand on a step or a block. Put your right hand on something for balance—a wall or a weight stack, for instance. Cross your right foot behind your left ankle and balance yourself on the ball of your left foot.
2. Lower your left heel as far as you can, pause, then lift it as high as you can. Finish the set with your left leg, then repeat with your right while holding the dumbbell in your right hand.
MOST MEN HAVE A SIMPLE PHILOSOPHY when choosing their lower-body exercises: The more weight plates they can pile on, the better the lift. But choosing your exercises based on the amount of weight you can heft is a lot like timing your 40-yard dash on the moving sidewalk at O'Hare.

That’s because the most popular exercises for your lower body—machine exercises like leg presses, leg extensions, and leg curls—allow you to lift heavier weights than their free-weight counterparts. Why? Because they give your body a mechanical advantage. So even though you’re able to lift more iron, you’re using less muscle. That puts you at a disadvantage when you’re trying to maximize your lower-body strength and size, says Michael Mejia, C.S.C.S., our exercise advisor.

In this chapter, Mejia gives you exercises that force your muscles to work without help from well-designed machinery—the same way they work in sports and real-life activities. You’ll hold the weights in different positions—behind your legs, in front of your shoulders, above your head—and prepare your body for virtually any task. Plus, you’ll work your muscles more intensely than you have before, which will stimulate them to grow.

When you see the end results of this program, we’re guessing you’ll have some new favorite exercises.

LEGS & GLUTES (PART 2)

THE REST OF YOUR WORKOUT

Do the leg and butt exercises described here before working any other muscle groups. You can do the rest of the lifts in your workout in any order. Try to increase the amount of weight you lift in each exercise by 5 to 10 percent each week.

Most important: Build strength and muscle size with equal effort on both sides of your body. Working the front and neglecting the back is a recipe for injury. Some suggestions:

► BEGINNER Do a total-body workout two or three times a week. After you finish these leg and butt exercises, you can try one set of eight to 12 repetitions (except where noted) of the following exercises:
  1. Lat pulldown
  2. Dumbbell chest press
  3. Cable or dumbbell row
  4. Seated alternating dumbbell press
  5. Cable triceps extension
  6. Dumbbell biceps curl
  7. Crunch (15 to 20 repetitions)

► INTERMEDIATE Divide your program into two workouts, one for upper body, one for lower. Alternate between the two workouts, taking a day off after each. For example, do the lower-body workout shown here on Monday and Friday and an upper-body workout on Wednesday; the following week, do the opposite.

  Upper-body workout
  Choose one exercise each for “horizontal pulling” (seated or bent-over row), one for “horizontal pushing” (dumbbell or barbell bench press), one for “vertical pulling” (pullup or lat pulldown), and one for “vertical pushing” (dumbbell or barbell shoulder press). Do two or three warmup sets and two work sets. (A work set means you’re using the most weight you can for that number of repetitions. The warmup sets should be percentages of that weight—maybe 40, 60, and 80 percent of the work-set weight. Do fewer repetitions in each warmup set.) You can finish with exercises for your biceps and triceps.

  Lower-body workout
  Do the exercises described here, followed by abdominal exercises.

► ADVANCED Divide your workout into three parts. Do each part once a week, with a day off between workouts.
  1. Vertical pushing and pulling
  2. Lower-body exercises, plus abdominals and calves
  3. Horizontal pushing and pulling
**BEGINNER**

Do the five beginner exercises for 4 weeks.

**WEEKS 1 & 2**: 2 sets of 10–12 repetitions of each exercise

**WEEKS 3 & 4**: 2 or 3 sets of 8–10

---

**Modified Farmer’s Walk**

1. Grab a pair of heavy dumbbells and stand holding them at arm’s length at your sides.
2. Stand on the balls of your feet, and walk forward until your grip is about to give out.
3. Put the dumbbells down, rest, and then turn around and repeat, going back to the starting point.

---

**45-Degree Traveling Lunge**

1. Grab a pair of dumbbells and hold them at your sides. Stand with your feet hip-width apart at one end of your house or gym—you need room to walk forward.
2. Step forward with your left foot at a 45-degree angle and lower your body until your right knee almost touches the floor and your left knee is bent 90 degrees.
3. Stand and bring your right foot up next to your left, then repeat with the right leg lunging forward. That’s one repetition.

---

**Barbell Front Squat**

1. Grab a bar with an overhand grip that’s just beyond shoulder-width and hold it in front of your body, just above your shoulders. Raise your upper arms so they’re parallel to the floor and let the bar roll back so it’s resting on your fingers, not your palms. Set your feet shoulder-width apart and keep your back straight, knees slightly bent, and eyes focused straight ahead.
2. Without changing the position of your arms, lower your body until your thighs are parallel to the floor.
3. Pause, then push yourself back up to the starting position.

---

**King Deadlift**

1. Stand with your knees slightly bent and your feet shoulder-width apart. (This is done without weights.) Lift your left foot behind you and bend the knee 90 degrees so your left lower leg is parallel to the floor.
2. Slowly lower your body until your right thigh is parallel to the floor. Your left leg will rise behind you as a counterbalance, and your torso will bend forward at the hips.
3. Pause, then push your body back to the starting position. Finish all of the repetitions, then repeat, lifting your right leg this time.

---

**Swiss-Ball Hip Extension and Leg Curl**

1. Lie on your back on the floor and place your lower legs on a Swiss ball. Put your hands flat on the floor at your sides.
2. Push your hips up so that your body forms a straight line from your shoulders to your knees.
3. Without pausing, pull your heels toward you and roll the ball as close as possible to your butt.
4. Pause, then reverse the motion—roll the ball back until your body is in a straight line, then lower your back to the floor and repeat.
**INTERMEDIATE / ADVANCED**

An intermediate should do the five intermediate/advanced exercises shown here for 4 weeks.

**WEEKS 1 & 2:** 2 sets of 8–10

**WEEKS 3 & 4:** 2 or 3 sets of 6–8

---

**ADVANCED**

Do the five intermediate/advanced exercises shown here for 4 weeks.

**WEEKS 1 & 2:** 2 sets of 6–8, after a thorough warmup with lighter weights

**WEEKS 3 & 4:** 2 or 3 sets of 4–6, after warmup

---

**Overhead Squat**

1. Stand holding a barbell with an overhand grip, and press it over your head so that your arms are fully extended. The bar should be directly over your shoulders. Set your feet shoulder-width apart.

2. Slowly lower your body as if you were sitting back into a chair, keeping your back in its natural alignment.

3. When your thighs are parallel to the floor, pause, then return to the starting position.

---

**Barbell Hack Squat**

1. Stand holding a barbell at arm’s length behind your back, using an overhand grip. Set your feet shoulder-width apart and place each heel on a 25-pound weight plate.

2. Slowly lower your body as if you were sitting back into a chair, keeping your back in its natural alignment.

3. When your thighs are parallel to the floor, pause, then return to the starting position.
**Dumbbell Calf Jump**

1. Stand with your feet hip-width apart. Grab a pair of dumbbells and hold them at your sides at arm’s length.
2. Dip your knees so they’re bent about 45 degrees and jump as high as you can. Point your toes toward the floor when you jump.
3. Allow your knees to bend 45 degrees when you land, then immediately jump again.

**Single-Leg Back Extension and Leg Curl**

1. Lie on your back on the floor; place your right lower leg on a Swiss ball and your left leg in the air, perpendicular to your body. Put your hands flat on the floor at your sides.
2. Push your hips up so that your body forms a straight line from your shoulders to your knees.
3. Without pausing, pull your right heel toward you and roll the ball as close as possible to your butt.
4. Pause, then reverse the movement and return to the starting position. Finish the repetitions and repeat with your left leg.

**Single-Leg Back Extension**

1. Position yourself in a back-extension station. Hook one foot under the leg anchors and leave the other foot resting on top. Cross your arms over your chest.
2. Lower your upper body, allowing your lower back to round, until it’s just short of perpendicular to the floor.
3. Raise your upper body until it’s slightly above parallel to the floor. At this point you should have a slight arch in your back, and your shoulder blades should be pulled together in back.
4. Repeat, finish the set, then repeat with your other foot under the leg anchor.
OUR ABDOMINAL MUSCLES ARE A LOT LIKE A skilled group of employees. The harder they work, the better they make you look. And vice versa. That’s because you use your abs in virtually every movement that matters: Lifting. Running. Jumping. Reproducing. (It takes a lot of midsection stability to stand over that copy machine. Especially when it’s printing on both sides of the page.) So the stronger they are, the harder and longer you’ll be able to play.

This 8-week ab-building program works your entire midsection—not just the six-pack muscle (rectus abdominis, for you Latin lovers), but also your obliques (at the sides of your waist) and your lower back. And some of the exercises even strengthen the deep abdominal and lower-back muscles that help you sit up straighter when you aren’t moving.

So whether you’re bending, twisting, leaping, or chilling, these exercises ensure that you and your abs will perform better and last longer.

And, on the off-chance that you need to remove your shirt before bending, twisting, leaping, or chilling, your hardworking, multitasking abdominal muscles will make that a painless experience, too.

Do the abdominal exercises first in your workout. After that, it’s up to you how to fit in exercises for other muscle groups. Here are some suggestions.

► BEGINNER Do a total-body workout two or three times a week. After you finish your abdominal exercises, you can try one set of eight to 12 repetitions of the following exercises:
1. Lat pulldown
2. Squat or leg press
3. Leg curl
4. Dumbbell chest press
5. Cable or dumbbell row
6. Cable triceps extension
7. Dumbbell biceps curl

► INTERMEDIATE Divide your program into two workouts, one for your upper body and one for your lower body. Perform your abdominal exercises on the day you do your lower-body workout. Alternate between the two workouts, taking a day off after each.

Upper-body workout Choose one exercise each for chest, back, biceps, and triceps. Do two or three sets of the chest and back exercises and one or two sets of the exercises for the arms.

Lower-body workout After doing the abdominal program in this installment, choose one “hip-dominant” lift—an exercise that emphasizes the hamstrings and gluteals (examples include stepups and deadlifts). Then choose one “knee-dominant” exercise, meaning the emphasis is on the quadriceps muscles of the front of the thigh (squats, leg presses, and lunges qualify). Do two or three warmup sets and two work sets. (A work set means you’re using the most weight you can for that number of repetitions. The warmup sets should be percentages of that weight—maybe 40, 60, and 80 percent. Do fewer repetitions in each warmup set.) Add your choice of calf exercises.

► ADVANCED Divide your workout into four parts. Do each one once a week; don’t work out more than 2 days in a row.
1. Shoulders and arms
2. Abdominal and knee-dominant exercises (described above), plus calves
3. Chest and back
4. Abdominal and hip-dominant exercises (also above), plus calves again
BEGINNER

Do the four beginner exercises for 4 weeks, followed by the intermediate exercises on the next page for weeks 5 through 8.

WEeks 1 & 2: 2 sets of 10-12 repetitions of each exercise except the bridge

WEeks 3 & 4: 2 or 3 sets of 12-15

WEeks 5-8: Do the intermediate program on the next page

Bridge

1. Start to get into a pushup position, but bend your elbows and rest your weight on your forearms instead of your hands. Your body should form a straight line from your shoulders to your ankles.

2. Pull your abdominals in, imagine you’re trying to move your belly button back to your spine. Hold this for 20 to 30 seconds, breathing steadily.

3. Release, then repeat for another 20 to 30 seconds. That equals two complete sets. As you build endurance, you can do one 60-second set instead of two shorter ones.

Russian Twist

1. Sit on the floor with your knees bent and your feet flat. Hold your arms straight out in front of your chest with your palms facing down. Lean back so your torso is at a 45-degree angle to the floor.

2. Twist to the left as far as you can, pause, then reverse your movement and twist all the way back to the right as far as you can. As you get stronger, hold a light weight in your hands as you do the movement.

Towel Crunch

1. Sit on the floor with your knees bent and your feet flat on the floor. Set a rolled-up towel under the arch of your lower back and lie back so your head rests on the floor. Place your fingers behind your ears.

2. Raise your head and shoulders and crunch your rib cage toward your pelvis.

3. Pause, then slowly return to the starting position.

Back Extension

1. Position yourself in a back-extension station and hook your feet under the leg anchor. Hold your arms straight out in front of you. Your body should form a straight line from your hands to your hips.

2. Lower your torso, allowing your lower back to round, until it’s just short of perpendicular to the floor.

3. Raise your upper body until it’s slightly above parallel to the floor. At this point you should have a slight arch in your back and your shoulder blades should be pulled together in back.

4. Pause, then repeat.
An intermediate should do the four intermediate exercises shown here for 4 weeks, then the advanced exercises for weeks 5 through 8.

**WEEKS 1 & 2:** 1 or 2 sets of 4–6

**WEEKS 3 & 4:** 2–3 sets of 6–8

**WEEKS 5 & 6:** 2 sets of 3–5

**WEEKS 7 & 8:** 2 or 3 sets of 5–8

---

**Swiss-ball Crunch**

1. Lie on your back on a Swiss ball with your hands behind your ears.
2. Raise your head and shoulders and crunch your rib cage toward your pelvis.
3. Pause and slowly return to the starting position.

---

**Two-Point Bridge**

1. Get into the standard pushup position.
2. Lift your right hand and your left leg off the floor at the same time. Hold for 3 to 5 seconds. That’s one repetition.
3. Return to the starting position, then repeat, lifting your left hand and your right leg this time. Continue to alternate until you’ve completed all of your repetitions. Make sure you do an equal number with each hand and leg.

---

**Hanging Leg Raise**

1. Grasp a chinup bar with an overhand grip and hang from it at arm’s length, with your knees slightly bent. If you have elbow straps—Ab-OrigOnals, for example—hang from them.
2. Without bending your legs any more, lift your knees as close to your chest as possible by rounding your back and curling your hips toward your rib cage.
3. Pause, then slowly lower your legs to the starting position.

---

**Low-to-High Reverse Woodchopper**

1. Attach a stirrup handle to a low cable pulley, grab it with both hands, and stand with your right side facing the cable station and your feet shoulder-width apart. Bend over and hold the handle with both hands just outside your right calf muscle. Your shoulders will be rotated toward the cable machine.
2. Straighten your arms and keep them straight throughout the entire movement.
3. Pull the handle up and across your torso as you straighten your body and twist your shoulders to the left. Your right arm ends up in front of your face, and the handle is at the same height as your ear.
4. Pause, then slowly return to the starting position. Finish the repetitions on this side, then switch sides to complete the set.

---

**Grasp a chinup bar with an overhand grip and hang from it at arm’s length, with your knees slightly bent. If you have elbow straps—Ab-OrigOnals, for example—hang from them.**
**Swiss-Ball Jackknife**

1. Get into pushup position—your hands set slightly wider than and in line with your shoulders—but instead of placing your feet on the floor, rest your shins on a Swiss ball. With your arms straight and your back flat, your body should form a straight line from your shoulders to your ankles.

2. Roll the Swiss ball toward your chest by raising your hips and rounding your back as you pull the ball forward with your feet.

3. Pause, then return the ball to the starting position by lowering your hips and rolling it backward.

---

**Oblique Hanging Leg Raise**

1. Grasp a chinup bar with an overhand grip and hang from it at arm’s length, with your knees slightly bent. If you have elbow straps—Ab-Origins, for instance—hang from them. Then raise your legs until your knees are bent 90 degrees.

2. Keep your knees bent and lift your left hip toward your left armpit, until your lower legs are parallel to the floor.

3. Pause, then return to the starting position and lift your right hip toward your right armpit. That’s one repetition.

---

**Long-Arm Circle Crunch**

1. Lie on your back on a Swiss ball with arms extended straight above your head—in line with your ears—and your thumbs crossed so that they interlock.

2. Raise your head and shoulders and crunch your rib cage toward your right hip, then continue contracting your abdominals to move your torso counterclockwise till you’re crunching upward, then left, then down, so that your upper body moves in a circle.

3. Each circle you complete is one repetition.

---

**Twisting Back Extension**

1. Position yourself in a back-extension station and hook your feet under the leg anchor. Place your fingers behind your ears.

2. Lower your upper body, allowing your lower back to round, until it’s just short of perpendicular to the floor.

3. Raise and twist your upper body until it’s slightly above parallel to the floor and facing left.

4. Pause, then lower your torso and repeat, this time twisting to the right. That’s one repetition.

---

**ADVANCED**

Do the four intermediate exercises on the previous page for 4 weeks, then switch to the advanced exercises for weeks 5 through 8.

**WEEKS 1 & 2:** 2 sets of 6–8

**WEEKS 3 & 4:** 2 or 3 sets of 8–10

**WEEKS 5 & 6:** 2 sets of 6–8

**WEEKS 7 & 8:** 2 or 3 sets of 8–10
Experience has taught us this little-known muscle-training secret: If you build the rest of your body, your arms will grow by default. That’s because they’re involved in virtually every exercise you do. You’ll never see a man with wide shoulders, a meaty chest, a V-shaped back…and puny arms. But plenty of guys spend hours on their arms and look as if they hardly work out at all. The lesson: Spend the majority of your workout time on your big muscles, and the smaller muscles—like your biceps and triceps—will take care of themselves.

However, there are times when your arms should be the center of attention—and not just when you’re updating your tattoo collection. Say you’ve been following our TBW program from the beginning. You’ve spent time working your shoulders, chest, back, abs, and lower body. You’re bigger, stronger, and probably better at every physical activity you attempt. But now your arms may be holding you back. And not because your ex-girlfriend’s name is still engraved on your left biceps.

So, the next 8 weeks are going to be all about arms—starting with this, the first of two 4-week programs. You should notice the difference in obvious and subtle ways. You’ll get stronger in exercises like the bench press and pullup because your arms will provide better assistance. And when you finally get your new girlfriend’s name tattooed on your arm, well, you’ll be able to use bigger letters.

Do the arm exercises first in your workout. After that, it’s up to you how to fit in exercises for other muscle groups. Here are some suggestions.

**Beginner**

Do a total-body workout two or three times a week. Here’s a sample:

- Lat pulldown
- Squat or leg press
- Leg curl
- Dumbbell chest press
- Cable or dumbbell row
- Crunch

**Intermediate**

Divide your program into two workouts, one for your upper body and one for your lower body. Perform your arm exercises on the day you do your upper-body workout. Alternate between the two workouts, taking a day off after each. So, for example, you might do the upper-body workout on Monday and Friday one week and the lower-body workout on Wednesday, then the following week do the lower-body workout on Monday and Friday and the upper-body routine on Wednesday.

**Upper-body workout**

After doing the arm program in this installment, choose one exercise each for your chest, back, and shoulders. Do two or three sets of the chest and back exercises and one or two sets of the exercises for your shoulders.

**Lower-body workout**

Choose one “hip-dominant” lift—an exercise that emphasizes the hamstrings and gluteals (examples include stepups and deadlifts). Then choose one “knee-dominant” exercise, meaning the emphasis is on the quadriceps muscles of the front of the thigh (squats, leg presses, and lunges qualify). Do two or three warmup sets and two work sets. (A work set means you’re using the most weight you can for that number of repetitions. The warmup sets should be percentages of that weight—maybe 40, 60, and 80 percent. Do fewer repetitions in each warmup set.) Add your choice of abdominal and calf exercises.

**Advanced**

Divide your workout into four parts. Do each one once a week; don’t work out more than 2 days in a row.

1. Arms and shoulders
2. Knee-dominant exercises (described above), plus abdominals and calves
3. Chest and back
4. Hip-dominant exercises (also above), plus abdominals and calves again
**BEGINNER**

Do the four beginner exercises for 4 weeks.

**WEEKS 1 & 2:** 1 or 2 sets of 10–12 repetitions of each exercise

**WEEKS 3 & 4:** 2 or 3 sets of 10–12

---

**Lying Dumbbell Triceps Extension**

1. Grab a pair of dumbbells and lie on your back on a flat bench. Hold the dumbbells over and slightly behind your head with straight arms, your palms facing each other. Your upper arms should be angled back.

2. Without moving your upper arms, bend your elbows to lower the dumbbells until your forearms are nearly perpendicular to the floor.

3. Pause, then lift the weights back to the starting position by straightening your arms.

---

**Standing Hammer Curl**

1. Grab an EZ-curl bar with a shoulder-width, overhand grip. Hold the bar at arm’s length over your head.

2. Without moving your upper arms, bend your elbows to lower the bar behind your head until your forearms are just past parallel to the floor.

3. Pause, then return the bar to the starting position by straightening your arms.

---

**Seated Preacher Curl**

1. Grab an EZ-curl bar with an underhand grip. Rest your upper arms on the sloping pad of the preacher bench and hold the bar at arm’s length in front of you, your elbows bent about 5 degrees.

2. Lift the bar as high as you can without moving your upper arms off the pad.

3. Pause, then slowly lower the bar to the starting position.

---

**Overhead Triceps Extension**

1. Grab an EZ-curl bar with a shoulder-width, overhand grip. Hold the bar at arm’s length over your head.

2. Without moving your upper arms, bend your elbows to lower the bar behind your head until your forearms are just past parallel to the floor.

3. Pause, then return the bar to the starting position by straightening your arms.
INTERMEDIATE
Do the four intermediate/advanced exercises shown here for 4 weeks.

WEEKS 1 & 2: 2 sets of 8–10
WEEKS 3 & 4: 2 or 3 sets of 6–8

ADVANCED
Do the four intermediate/advanced exercises shown here for 4 weeks.

WEEKS 1 & 2: 2 sets of 6–8, after a thorough warmup with lighter weights
WEEKS 3 & 4: 2 or 3 sets of 4–6, after warmup

Body-Weight Triceps Extension

1. Set the barbell supports of a squat rack about 3 to 4 feet above the floor and place a bar across them.
2. Grab the bar with an overhand grip, your hands 6 to 8 inches apart. Still holding the bar, back up until you’re in a modified pushup position: Your arms are straight, your body nearly forms a line from your head to your ankles, and you’re standing on the balls of your feet.
3. Lower your head toward the bar by bending your elbows until your head nearly touches the bar.
4. Pause, then push yourself back up to the starting position by straightening your arms.

Dumbbell Overhead Triceps Extension with Feet Elevated

1. Grab a pair of dumbbells and sit on the end of a bench with your back straight. Hold the dumbbells at arm’s length above your head, your palms facing each other. Lift your feet off the ground a few inches by raising your thighs slightly.
2. Without moving your upper arms, lower the dumbbells behind your head until your forearms are just past parallel to the floor.
3. Pause, then straighten your arms to return the dumbbells to the starting position.

INTERMEDIATE / ADVANCED

Grab the bar with an overhand grip, your hands 6 to 8 inches apart. Still holding the bar, back up until you’re in a modified pushup position: Your arms are straight, your body nearly forms a line from your head to your ankles, and you’re standing on the balls of your feet.
Single-Arm Unsupported Concentration Curl

1. Grab a dumbbell with your left hand and stand with your feet shoulder-width apart. Keep your back flat and bend at your hips and knees until your upper body is almost parallel to the floor. Let your left arm hang straight down from your shoulder and place your right hand on your right thigh.

2. Curl the dumbbell toward your chin as high as you can without moving your upper arm.

3. Pause, then slowly return to the starting position. Finish the repetitions with your left arm, then switch to your right to complete the set.

Incline Zottman Curl

1. Set an incline bench at about a 60-degree angle and grab a pair of dumbbells. Lie on your back on the incline bench and let the dumbbells hang at arm’s length straight from your shoulders, your palms facing forward.

2. Curl the weights up as high as you can without moving your upper arms forward.

3. At the top of the curl, rotate your wrists so your palms face the floor. Slowly lower them in that position.

4. At the bottom of the curl, turn your palms forward again to start the next repetition.
IDEO GAMES AREN'T USUALLY ASSOCIATED WITH FITNESS. BUT YOU COULD PROBABLY LEARN SOMETHING ABOUT BUILDING MUSCLE FROM THAT OLD GAME-BOY IN YOUR BASEMENT. LIKE MOST VIDEO-GAME SYSTEMS, IT LETS YOU START WITH EASIER VERSIONS OF A GAME WHEN YOU'RE A BEGINNER AND ADDS TOUGHER LEVELS OF PLAY LATER ON. THE REASON: YOU NEED TO KEEP CHALLENGING YOURSELF IN ORDER TO IMPROVE.

THE SAME HOLDS TRUE FOR YOUR MUSCLES. THEY ADAPT TO YOUR EXERCISE ROUTINE BY GROWING, WHICH IN TURN MAKES YOUR WORKOUT EASIER. BUT THE LONGER YOU DO THE SAME EXERCISES THE SAME WAY, THE LESS THE MUSCLES ARE FORCED TO PROGRESS. AND THAT MEANS YOU GET DIMINISHING RETURNS ON YOUR WORKOUT INVESTMENT.

IN THIS CHAPTER, WE'RE GOING TO MAKE ALL OF THE STANDARD ARM EXERCISES GUYS NORMALLY USE MORE DIFFICULT. THINK OF IT AS PLAYING A VIDEO GAME ON THE “EXPERT” LEVEL FOR THE FIRST TIME. YOU HAVE TO RISE TO THE OCCASION. FOLLOW THIS PLAN AND YOUR MUSCLES WILL DO THE SAME.

THE REST OF YOUR WORKOUT

Do the arm exercises first in your workout. After that, it’s up to you how to fit in exercises for other muscle groups. Here are some suggestions.

► BEGINNER Do a total-body workout two or three times a week. Try one set of eight to 12 repetitions of the following exercises after you finish your arm exercises.
1. Lat pulldown
2. Squat or leg press
3. Leg curl
4. Dumbbell chest press
5. Cable or dumbbell row
6. Crunch

► INTERMEDIATE Divide your program into two workouts, one for your upper body and one for your lower body. Perform arm exercises in the upper-body workout. Alternate between the two taking a day off after each. So you might do the upper-body workout on Monday and Friday one week and the lower-body workout on Wednesday, then the following week do the lower-body workout on Monday and Friday and the upper-body workout on Wednesday.

Upper-body workout After arm exercises, choose one exercise each for your chest, back, and shoulders. Do two or three sets of the chest and back exercises and one or two sets for your shoulders.

Lower-body workout Choose one “hip-dominant” lift—an exercise that emphasizes the hamstrings and gluteals (examples include stepups and deadlifts). Then choose one “knee-dominant” exercise, meaning the emphasis is on the quadriceps muscles of the front of the thigh (squats, leg presses, and lunges qualify). Do two or three warmup sets and two work sets. (A work set means you’re using the most weight you can for that number of repetitions. The warmup sets should be percentages of that weight—maybe 40, 60, and 80 percent. Do fewer repetitions in each successive warmup set.) Add your choice of abdominal and calf exercises.

► ADVANCED Divide your workout into four parts. Do each one once a week; don’t work out more than 2 days in a row.
1. Arms and shoulders
2. Knee-dominant exercises (described above), plus abdominals and calves
3. Chest and back
4. Hip-dominant exercises (also above), plus abdominals and calves again
BEGINNER / INTERMEDIATE

BEGINNER.
Do the four beginner/intermediate exercises shown here for 4 weeks.
WEEKS 1 & 2: 2 sets of 10–12 repetitions of each exercise
WEEKS 3 & 4: 2 or 3 sets of 8–10

INTERMEDIATE
Do these four exercises for 4 weeks.
WEEKS 1 & 2: 2 sets of 8–10
WEEKS 3 & 4: 2 or 3 sets of 6–8

Dip
1. Grab the parallel bars on a dip station and lift yourself so that your arms are fully extended. Bend your knees and cross your ankles behind you.
2. Slowly lower your body by bending your elbows until your upper arms are parallel to the floor.
3. Pause, then push yourself back to the starting position. Superset with chinups (do the exercises back to back; rest after completing a set of each), shown below.

Note: Use a weighted belt if you can do more than the recommended repetitions.

Grab a pair of dumbbells with an underhand grip and hold them at arm’s length in front of your thighs. Raise your right forearm so that your elbow is bent 90 degrees and hold it there.
Curl the dumbbell in your left hand toward your chest as far as you can without moving your left upper arm.
Pause, then slowly lower the weight to the starting position. Continue holding your right arm at 90 degrees while you do all of your repetitions with your left arm, then switch arms, performing the static hold with your left arm and curling with your right.

Close-Grip Chinup
1. Grab the chinup bar with an underhand grip—your hands about 6 inches apart—and hang with your ankles crossed behind you.
2. Pull yourself up as high as you can.
3. Pause, then slowly return to the starting position.

Note: Use a weighted belt if you can do more than the recommended repetitions.

Attach single-arm handles to the high pulleys on each side of a cable station. Using an overhand grip, grab the left handle with your right hand and the right handle with your left hand. Stand with your feet shoulder-width apart and your knees slightly bent.
Hold the handles near your chin, with your arms crossed.
Without moving your upper arms, slowly pull the handles away from your body until your arms are straight.
Pause, then slowly return to the starting position and repeat. Superset with biceps curls, below.

Double Cable Triceps Extension

Dumbbell Biceps Curl with Static Hold
1. Grab the parallel bars on a dip station and lift yourself so that your arms are fully extended. Bend your knees and cross your ankles behind you.
2. Slowly lower your body by bending your elbows until your upper arms are parallel to the floor.
3. Pause, then push yourself back to the starting position. Superset with chinups (do the exercises back to back; rest after completing a set of each), shown below.

Note: Use a weighted belt if you can do more than the recommended repetitions.
ADVANCED

Do the five advanced exercises shown here for 4 weeks.

**WEEKS 1 & 2:** 2 sets of 6–8, after a thorough warmup with lighter weights

**WEEKS 3 & 4:** 2 or 3 sets of 4–6, after warmup

---

### Swiss-Ball Close-Grip Pushup

1. Place your hands about 6 to 8 inches apart on a Swiss ball and rest your feet on a bench, so you’re in pushup position. Your body should form a straight line from your shoulders to your ankles.

2. Lower your body by bending your elbows until your upper arms are parallel to the floor.

3. Pause, then push yourself back up to the starting position. Superset with reverse curls, below.

---

### 45-Degree Prone Reverse Curl

1. Set an incline bench to a 45-degree angle. Grab a pair of dumbbells with an overhand grip and sit with your chest against the pad, letting your arms hang straight down from your shoulders.

2. Curl both dumbbells as high as you can without moving your upper arms.

3. Pause, then slowly return to the starting position.
Scapjack

1. Attach a single-arm handle to the high pulley of a cable station and pull it down with your right hand in an overhand grip until your elbow is bent 90 degrees. Then grab a dumbbell with your left hand and hold it at arm’s length next to your hip, with your palm facing forward.

2. Pull the cable handle down to your side with your right hand while you curl the dumbbell toward your chest with your left hand.

3. Pause, then return to the starting position and repeat. Do all of your repetitions before switching hands to finish the set.

Swiss-Ball Alternating Dumbbell Extension

1. Grab a pair of dumbbells and position yourself on your back on a Swiss ball, your feet on the floor and knees bent, so that your body forms a straight line from your chest to your knees.

2. Hold the dumbbells over your forehead with straight arms, your palms facing each other. Then lower the weights without moving your upper arms, until your forearms are just below parallel to the floor. Hold the right dumbbell in that position as you raise the left dumbbell back to the starting position.

3. Lower the left dumbbell, keep it in that position, and raise the right dumbbell. Continue to alternate dumbbells until you’ve performed the full number of repetitions with each arm. Superset with preacher curls, below.

Swiss-Ball Preacher Curl

1. Grab an EZ-curl bar with an underhand grip. Kneel behind a Swiss ball and rest your upper arms on the ball, your body weight back toward your heels. Hold the bar at arm’s length in front of you, your elbows bent about 5 degrees.

2. Curl the weight up as high as you can without moving your upper arms off the Swiss ball, or until the bar is about 6 inches away from your biceps.

3. Pause, then slowly lower the bar to the starting position.

Grab a pair of dumbbells and position yourself on your back on a Swiss ball, your feet on the floor and knees bent, so that your body forms a straight line from your chest to your knees. Pull the cable handle down to your side with your right hand while you curl the dumbbell toward your chest with your left hand. Pause, then return to the starting position and repeat. Do all of your repetitions before switching hands to finish the set.
T’S HUMAN NATURE TO TRY TO MAKE HARD THINGS EASY.
So we keep trying to date models, even though our success rates would soar if we stuck with accountants and librarians.

In the gym, most men prefer to take the easy way out, using machines to build muscles because the barbells and dumbbells are harder to grip and balance. But when you avoid the parts of an exercise that make it hard, you also avoid the parts that make your muscle hard.

That’s why our exercise advisor, Michael Mejia, C.S.C.S., devised this series with the idea that you should make lifting harder, rather than easier. So far, he’s shown you how to do this muscle group by muscle group. Now he shows you how to put all those purposely tougher exercises into a total-body workout. The strategy is when working any muscle group, start with an exercise that challenges your balance and stability, calling as many muscles as possible into action to keep you from falling over. Then, as you tire out those muscles, you move to an exercise that provides more support, so you can hit your targeted muscles with heavier weights.

The result is increased coordination and athleticism, along with more thorough muscle development and greater total-body strength. All of which will come in handy when that woman you’re courting asks you to help move her furniture into her new sixth-floor apartment. The better you look lifting it, the better your chances of getting to use some of it.

The program is divided into two workouts: upper body and lower body. Alternate between the two workouts, taking a day off after each. You might do the upper-body workout on Monday and Friday one week and the lower-body workout on Wednesday, then the following week do the lower-body workout on Monday and Friday and the upper-body workout on Wednesday.

► TECHNIQUES The upper-body exercises in Workout 1 are arranged in supersets—pairs of exercises performed one after the other. You’ll see them listed as A-1 and A-2, B-1 and B-2, and so forth. Complete the moves in the order shown on the next page by doing all of the sets of the “A” exercises first, followed by the “B” exercises, and so on. Do both exercises in each superset without rest.

The lower-body workout uses trisets—three exercises performed consecutively without rest in between. (Note: The last sequence of lower-body exercises is performed as a superset.) You’ll see the exercises in each triset designated, for example, as A-1, A-2, and A-3.

► WARMUP For each group of exercises, perform a warmup set. Do the number of repetitions suggested with about 60 percent of the weight you’ll use for your work sets.

► REST Rest 60 seconds after each superset or triset.

► PROGRESS When you can do the maximum number of prescribed repetitions for each set, increase the weight you’re using by 5 to 10 percent.

► SPEED OF REPETITIONS Take 2 seconds to lower the weight, pause, then push or pull the weight back to the starting position as quickly as you can, but in a controlled manner.

► BEGINNER/ADVANCED If you’re new to weight lifting or returning to it after a long layoff, follow the sets and repetitions recommended for beginners.

Do the advanced routine if you’ve been following the Total Body Workbook v2.0 program from the beginning or have been lifting consistently for more than a year.

► ABDOMINAL WORKOUT Perform your favorite ab exercises after each workout. Choose two or three moves and do two or three sets of 10 repetitions of each.
**UPPER-BODY WORKOUT**

**Group 1**

**SWISS-BALL PUSHUP** (page 9)
Beginner: 2 or 3 sets of 4–6 repetitions
Advanced: 2 or 3 sets of 6–8 repetitions

**ALTERNATING DECLINE DUMBBELL PRESS** (page 9)
Beginner: 2 or 3 sets of 6–8 repetitions
Advanced: 2 or 3 sets 4–6 repetitions

**Group 2**

**SNATCH-GRIP BENT-OVER ROW** (page 10)
Beginner: 2 or 3 sets of 6–8 repetitions
Advanced: 2 or 3 sets 8–10 repetitions

**PRONATED LAT PULLDOWN** (page 8)
Beginner: 2 or 3 sets of 10–12 repetitions
Advanced: 2 or 3 sets 8–10 repetitions

**Group 3**

**SEATED ALTERNATING DUMBBELL PRESS** (page 4)
Beginner: 2 or 3 sets of 6–8 repetitions
Advanced: 2 or 3 sets 4–6 repetitions

**45-DEGREE SCARECROW** (page 4)
Beginner: 2 or 3 sets of 10–12 repetitions
Advanced: 2 or 3 sets 8–10 repetitions

**Group 4**

**BICEPS CURL WITH STATIC HOLD** (page 32)
Beginner: 2 or 3 sets of 6–8 repetitions
Advanced: 2 or 3 sets 4–6 repetitions

**SEATED PREACHER CURL** (page 28)
Beginner: 2 or 3 sets of 10–12 repetitions
Advanced: 2 or 3 sets 8–10 repetitions

**Group 5**

**DUMBBELL OVERHEAD TRICEPS EXTENSION WITH FEET ELEVATED** (page 29)
Beginner: 2 or 3 sets of 6–8 repetitions
Advanced: 2 or 3 sets 4–6 repetitions

**LYING DUMBBELL TRICEPS EXTENSION** (page 28)
Beginner: 2 or 3 sets of 10–12 repetitions
Advanced: 2 or 3 sets 8–10 repetitions

**LOWER-BODY WORKOUT**

**Group 1**

**DUMBBELL SPLIT SQUAT** (page 16)
Beginner: 2 or 3 sets of 6–8 repetitions
Advanced: 2 or 3 sets 4–6 repetitions

**BARBELL SQUAT** (page 17)
Beginner: 2 or 3 sets of 6–8 repetitions
Advanced: 2 or 3 sets 4–6 repetitions

**LEGG PRESS** (page 16)
Beginner: 2 or 3 sets of 8–10 repetitions
Advanced: 2 or 3 sets 6–8 repetitions

**Group 2**

**SINGLE-LEG SWISS-BALL HIP EXTENSION AND LEG CURL** (page 22)
Beginner: 2 or 3 sets of 4–6 repetitions
Advanced: 2 or 3 sets 6–8 repetitions

**SNATCH-GRIP ROMANIAN DEADLIFT** (page 16)
Beginner: 2 or 3 sets of 8–10 repetitions
Advanced: 2 or 3 sets 6–8 repetitions

**SINGLE-LEG CURL** (page 18)
Beginner: 2 or 3 sets of 6–10 repetitions
Advanced: 2 or 3 sets 4–8 repetitions

**Group 3**

**SINGLE-LEG STANDING CALF RAISE** (page 18)
Beginner: 2 or 3 sets of 8–10 repetitions
Advanced: 2 or 3 sets 6–8 repetitions

**ALTERNATING SEATED CALF RAISE** (page 16)
Beginner: 2 or 3 sets of 15–20 repetitions
Advanced: 2 or 3 sets 15–20 repetitions

**DUMBBELL SPLIT SQUAT** (page 16)
Beginner: 2 or 3 sets of 8–10 repetitions
Advanced: 2 or 3 sets 6–8 repetitions
MAJOR CRIME FIGURES have a simple solution to most dilemmas: They hire muscle. The more they use, the faster the fix. And even if your problem is “fat,” not “rat,” the principle still holds. Instead of making Sammy the Snitch disappear, the muscle you take on can make your gut go away. That’s because unlike a Mafia henchman, your muscle doesn’t accept cash. It demands calories.

The reason is simple. The harder your muscles work, the more energy they need. So by working as many muscles as possible in each exercise, you’ll burn more calories than if you performed single-muscle isolation exercises. And that means a harder, leaner body.

In this special 4-week total-body fat-loss program, you’ll work your muscles harder than ever before by focusing on total-body movements. So you’ll twist when you perform a shoulder press, hoist the barbell as you squat, and stand on one leg when you do bent-over rows. That way, you’ll incorporate more muscles into each exercise than you would by doing traditional moves. And besides increasing your calorie burn during your exercise session, this strategy also boosts your metabolism for hours afterward. That means you’ll burn fat at a higher rate long after your workout’s over.

You’ll also go from one exercise to another with little or no rest in between moves. That will trigger a surge in your powerful fat-burning hormones, for an even more effective gut-melting workout.

Consider this workout your overdue collection notice to that unwanted belly. It’s time to make your fat pay.

THE WORKOUTS

This program is divided into two full-body workouts: Workout A and Workout B. Alternate between the two, taking a day off after each. So, for example, 1 week you might do Workout A on Monday and Friday and Workout B on Wednesday, then the following week do Workout B on Monday and Friday and Workout A on Wednesday. Continue in this fashion for the entire 4-week program.

► TECHNIQUES

Workout A

The upper-body exercises in Workout A are arranged in supersets—pairs of exercises performed one after the other without rest—instead of straight sets. Complete the moves in the order shown on the next page by doing all of the Set 1 exercises first, followed by the Set 2 exercises, and so on. Do both exercises in each superset without rest.

Workout B

The first two sets of exercises are called “complexes.” You do the three exercises in succession without putting down the bar. That’s one repetition. (In the second complex, the model is shown using different weights for each phase of the complex, since we originally photographed the moves as stand-alone exercises. But you’ll do them using the same weight for each.) Groups 3 and 4 are supersets, just as in Workout A.

► WARMUP For each group of exercises, perform a warmup set. Do the number of repetitions suggested with about 60 percent of the weight you’ll use for your work sets. Don’t exhaust yourself on the warmup sets. They’re just intended to prepare your muscles and connective tissues for the harder work to come. You’ll reduce your risk of injuries and perform better at the same time.

► REST Rest 60 seconds after each superset or triset.

► PROGRESS When you can do the maximum number of prescribed repetitions in each set, increase the weight you’re using for a particular exercise by 5 to 10 percent.

► ABDOMINAL WORK Perform your favorite ab exercises after each workout. Choose two or three moves and do two or three sets of 10 repetitions of each.
WORKOUT A

Group 1

1. Hold a barbell with an overhand grip so that it rests comfortably on your upper back (not on your neck). Set your feet shoulder-width apart and keep your back straight, knees slightly bent, and eyes focused straight ahead.

2. Slowly lower your body as if you were performing a squat, but keep the bar at the starting level by pushing it up slowly as you squat.

3. When your thighs are parallel to the floor and your arms are fully extended above your shoulders, pause, then return to the starting position.

   2 or 3 sets of 5–7 reps

Leg-Press

1. Position yourself in a leg-press machine so that your back is against the pad and your feet are about 4 inches apart on the platform.

2. Unlock and slowly lower the platform until your knees are bent 90 degrees. Keep the base of your lumbar spine against the back pad.

3. Pause, then push the weights back up to the starting position.

   2 or 3 sets of 15-20 reps

Group 2

Single-Leg Alternating Dumbbell Row

1. Grab a pair of dumbbells and stand with your left foot in front of your right. Keep your back flat and bend over at the hips so the dumbbells are hanging at arm’s length, your palms facing in. Raise your right foot off the floor.

2. Raise your left upper arm as high as you can by bending your elbow and squeezing your shoulder blade toward the middle of your back.

3. As you lower your left arm, raise your right—that’s one repetition.

4. Alternate until you finish the set.

5. Alternate the foot you raise and the arm you start with on each set.

   2 or 3 sets of 5-7 reps

Cable Row

1. Attach a long, straight bar to the cable and position yourself at the machine. Grab the bar with an overhand grip that’s just beyond shoulder-width. Sit up straight and pull your shoulders back.

2. Pull the bar to your abdomen without leaning back more than a few degrees.

3. Pause, then slowly return to the starting position with no leaning forward at the waist or hips.

   2 or 3 sets of 10-12 reps
**Snatch-Grip Romanian Deadlift**

1. Grab a barbell with a wide (but still comfortable) overhand grip. Hold the bar down at arm’s length in front of you. Your feet should be hip-width apart and your knees slightly bent.

2. Keep your lower back arched slightly, and slowly bend at the hips as far as you can without losing the arch. (The bar will probably be just below your knees.) Don’t change the angle of your knees, and keep the bar as close to your body as possible throughout the movement.

3. Pause, then lift your torso back to the starting position.

2 or 3 sets of 5-7 reps

---

**Lying Leg Curl**

1. Lie facedown on a leg-curl machine with the pads against your lower legs, above your heels and below your calf muscles.

2. Without raising your body off the pads, bend your legs at the knees and pull the weight toward you as far as you can.

3. Pause, then slowly return to the starting position.

2 or 3 sets of 10-12 reps

---

**Swiss-Ball Pushup**

1. Get into pushup position—your hands slightly wider than and in line with your shoulders—but instead of placing your feet on the floor, rest your shins on a Swiss ball. With your arms straight and your back flat, your body should form a straight line from shoulders to ankles.

2. Lower your body until your chest nearly touches the floor.

3. Pause, then push yourself back up to the starting position.

2 or 3 sets of 6-8 reps

---

**Barbell Bench Press**

1. Lie on your back on a flat bench with your feet on the floor. Grab the bar with an overhand grip, your hands just beyond shoulder-width apart. Lift the bar off the uprights and hold it at arm’s length over your chest.

2. Slowly lower the bar to your chest.

3. Pause, then push the bar back up to the starting position.

2 or 3 sets of 10-12 reps
**Dumbbell Calf Jump**

1. Standing with your feet hip-width apart, grab a pair of dumbbells and hold them down at your sides at arm’s length.
2. Dip your knees so they’re bent about 45 degrees, and jump as high as you can. Point your toes straight down to the floor when you jump.
3. Allow your knees to bend 45 degrees when you land, then immediately jump and point your toes again.
   
   2 or 3 sets of 5 or 6 reps

**Twisting Standing Dumbbell Shoulder Press**

1. Stand holding a pair of dumbbells just outside your shoulders at jaw level, palms facing in.
2. Press the dumbbells overhead as you twist to your right.
3. Lower the dumbbells to your shoulders as you twist back to the center, then twist to the left as you press the weights upward again.

   4. If you end the set with an odd number of repetitions, start the next set by twisting to the side opposite the one you finished on in the previous set.

   2 or 3 sets of 6-10 reps

---

**45-Degree Traveling Lunge**

1. Grab a pair of dumbbells and hold them at your sides. Stand with your feet hip-width apart at one end of your house or the gym; you need room to walk forward about 16 to 20 steps.
2. Step forward with your left foot at a 45-degree angle and lower your body so your right thigh is perpendicular to the floor and your left knee is bent 90 degrees. Your right knee should also bend and almost touch the floor.
3. Stand and bring your right foot up next to your left, then repeat with the right leg lunging forward at a 45-degree angle. That’s one repetition.

   2 or 3 sets of 10-12 reps

---

**Group 6**

**Twisting Standing Dumbbell Shoulder Press**

1. Stand holding a pair of dumbbells just outside your shoulders at jaw level, palms facing in.
2. Press the dumbbells overhead as you twist to your right.
3. Lower the dumbbells to your shoulders as you twist back to the center, then twist to the left as you press the weights upward again.

   4. If you end the set with an odd number of repetitions, start the next set by twisting to the side opposite the one you finished on in the previous set.

   2 or 3 sets of 6-10 reps

---

**Pronated Lat Pulldown**

1. Grab the bar with a shoulder-width, overhand grip.
2. Moving only your arms, pull the bar down to your chest by squeezing your shoulder blades together.
3. Pause, then slowly return to the starting position.

   2 or 3 sets of 10-12 reps
Hang Clean/Barbell Front Squat/Push Press

1. Grab a barbell with an overhand grip that’s just beyond shoulder-width and hold it in front of your thighs while standing with your knees slightly bent. Your lower back should be in its natural alignment (that is, slightly arched).

2. Shrug your shoulders as you pull the bar up as hard as you can. You should rise up on your toes as you do this.

3. When the bar reaches chest level, bend your knees again, rotate your upper arms so they’re under the bar, and bend your wrists so they go around the bar as you “catch” the bar on the front of your shoulders.

4. Stand with the bar, keeping your forearms parallel to the floor.

5. Lower your body, without changing the position of your arms, until your thighs are parallel to the floor.

6. Pause, then push yourself back to the starting position.

7. Bend your knees about 30 to 45 degrees, then quickly and explosively straighten them as you press the bar overhead.

8. Slowly lower the barbell to your shoulders, then rotate your arms and wrists so they’re over the bar as you lower it to your waist. Finally, lower it back down to the starting position, just below your knees, as you bend forward at the hips. Now you’re ready to start in on the next repetition.

2 or 3 sets of 5-8 reps
Snatch-Grip Shrug/Romanian Deadlift/Bent-Over Row

1. Grab a barbell with an overhand grip that’s as wide as comfortably possible. Set your feet shoulder-width apart and hold the bar down at arm’s length in front of you.

2. Lean forward slightly at the hips so the bar is about an inch in front of your thighs.

3. Shrug your shoulders as high as you can.

4. Pause, then slowly lower the barbell.

5. Keep your lower back arched slightly, and slowly bend at the hips as far as you can without losing the arch. (The bar will probably be just below your knees.) Don’t change the angle of your knees, and keep the bar as close to your body as possible throughout the movement.

6. Pause, then pull the bar up to your torso in a rowing motion.

7. Pause again, then slowly lower the bar until it’s just below your knees.

8. Finally, lift your torso back to the starting position. Now you’re ready to begin the next repetition.

2 or 3 sets of 5-8 reps

NOTE: Use the same weight for the whole exercise.
**WORKOUT B**

**Group 3**

1. **Single-Arm Lat Pulldown**
   - Attach a single handle to a lat-pulldown machine. Sit on the seat with your legs under the thigh pads and your back straight. Grasp the handle with your right hand, palm facing forward.
   - Slowly pull the handle straight down until your elbow touches your side.
   - Pause, then return to the starting position.
   - 2 or 3 sets of 10-12 reps

2. **Santana T-Pushup**
   - Get into pushup position with your hands resting on the handles of hexagonal dumbbells that have been placed shoulder-width apart.
   - Do a pushup, and as you come up, rotate your body so that you raise your right arm and the dumbbell straight up over your shoulder and your body forms a T.
   - Lower the dumbbell and your body, and repeat on the other side.
   - 2 or 3 sets of 6-8 reps

**Group 4**

1. **45-Degree Traveling Lunge**
   - Grab a pair of dumbbells and hold them at your sides. Stand with your feet hip-width apart at one end of your house or the gym; you need room to walk forward about 16 to 20 steps.
   - Step forward with your left foot at a 45-degree angle and lower your body so your right thigh is perpendicular to the floor and your left knee is bent 90 degrees. Your right knee should also bend and almost touch the floor.
   - Stand and bring your right foot up next to your left, then repeat with the right leg lunging forward at a 45-degree angle. That’s one repetition.
   - 2 or 3 sets of 10-12 reps

2. **Dumbbell Upright Row**
   - Grab a pair of dumbbells with an overhand grip and stand with your feet shoulder-width apart, your knees slightly bent. Let the dumbbells hang at arm’s length next to the outside of your thighs, thumbs pointed toward each other.
   - Bending your elbows, lift your upper arms straight out to the sides and pull the dumbbells straight up, until your upper arms are parallel to the floor and the dumbbells are just below chest level. (You’ll look like a scarecrow.)
   - Pause, then return to the starting position.
   - 2 or 3 sets of 8-10 reps
